

Holten Easy salt saturator & blending system

www.safecote.com

The Holten Easy, advanced technology with adaptability.

Simple to use proven technology that not only has a fast brine production rate but can process either white or brown salt.

The Holten Easy salt saturator is the most technologically advanced brine maker on the market. The production process is fully automated, with no manual valves or switches and access is ID protected for authorised personnel only. It is capable of producing brine by using either white or brown rock salt, as well as marine and evaporated salts. In addition to the saturator, a fully automated blending station is also available, allowing the addition of additives such as Safecote and other chlorides to be injected when temperatures dictate that salt brine alone is ineffective.

Key benefits

- > Produces brine from any salt type
- > 2,500ltr/hr production rate
- > Self-contained unit storing up to 20,000litrs
- > Additional storage tanks can be easily fitted
- > Low maintenance waste filter
- > Waste discharged during production process via outlet pipe
- > Saturation control to suit your requirements
- > Remote access to live/historic data
- > Can supply 100,000ltr/hr (when applying liquid only) – standard 20,000ltr/hr
- > Low level indicators and alarms
- > Automatic lid opener
- > Auto fill connection to vehicle
- > Summer circulation setting
- > Brine concentration display
- > Fill level display
- > Taking back mode of brine
- > Made for outside use
